

Terrace Expansion Program - Phase II

**PROJECT DESCRIPTION**

Terrace Phase II consists of 123 kilometres of new NPS 36" diameter pipeline over three separate construction segments between Hardisty, Alberta, and Kerrobert, Saskatchewan. The project connects existing sections of NPS 48" diameter pipeline, and extends the 894 kilometre fifth pipeline created in Phase I by a total of 176 kilometres. As part of the Terrace expansion, Enbridge also built two new pumping stations and make various modifications to existing facilities and equipment. Terrace Phase II was built to help meet pipeline transportation needs for crude oil and petroleum liquids as forecast by the industry for oil sands and other production from the Western Canadian Sedimentary Basin.

Client

Enbridge Pipelines Inc.

Job Number

02001M

Work Type

Mainline Pipeline

Location

Saskatchewan

Role

General Contractor
