

PROJECT DESCRIPTION

RB Somerville provides "As and When Required" Maintenance and Emergency Work for documented and suspected leaks to their self contained oil filled cable type network in the Greater Toronto Area. Specifically, we provide manpower and equipment as needed to find any potential or documented leaks by performing the following operations: site inspection, ordering locates, mobilizing to site, traffic control, break out and excavate by the means necessary and locate cables. If a suspected leak is not found at that time, we would usually continue excavating until a source leak is found. HydroOne would then repair the pipe casing and then RB Somerville would backfill the excavation and remediate the site of any contaminated material, and provide final cleanup.

Client

Hydro One Networks Inc.
