

PROJECT DESCRIPTION

The Calgary Airport is adding an additional runway and associated taxiways at its facility as part of the Calgary Airport Runway Development Project. In order to service the lighting and communication requirements, Robert B. Somerville in partnership with Black & McDonald Limited, are supplying and installing approximately 35km of concrete encased ductbank and approximately 400 manhole/handholes. These facilities will then be tied into existing systems at the terminal. Plant will be installed adjacent and parallel to the new runway/taxiways, as well as in a number of crossings. The duct structures range from a 2 duct to a 42 duct structure with approximately 235,000m of duct.
