

PROJECT DESCRIPTION

To facilitate the Alberta Transportation's Carseland-Bow River Headworks System Rehabilitation project, a lowering of the existing NPS12 pipeline was required. Robert B Somerville was retained as prime contractor and completed a replacement using HDD for approximately 233 meters of the NPS12 pipeline. Following the HDD installation, tie-ins to the existing pipeline were completed according to the design. The project was executed within the working space for the Alberta Transportation contractors which required developing and maintaining a close and harmonious working relationship with all parties.

For over fifty years, we have leveraged innovation to connect communities. We remain committed to responsibly construct a clean, sustainable future. Somerville builds the infrastructure that makes energy reliably flow; from generation to generation.

Job Number: 15016

Role: General Contractor

Duration: June 23, 2015 to August 27, 2015

Client: Trans Canada Pipelines

Primary Work Type: Pipeline Construction

Other Work Type: Horizontal Directional Drilling
